The **eDJ Tech Matrix** contains over
220 eDiscovery applications with 134 features
submitted by **eDJ Experts, Users** and **Providers** for
easy search and comparison.

The eDJ Matrix For Technology and Service Providers

Is your eDiscovery application part of the eDJ Matrix yet? The eDJ Matrix is a fast and easy to use tool that enables comparison of software applications and services that offer eDiscovery and Information Governance related features. It was created to help those looking for such applications and services to untangle the large number of providers, features and the sheer complexity of the selection process. Features are grouped by relevant categories including phases of the **Electronic Discovery Reference Model**.

As an eDiscovery solution provider, the eDJ Matrix serves as an avenue to ensure your offering is seen alongside others in an unbiased and ad free forum. Applications and services can be submitted for free and then reviewed by the public and providers without subjective value statements or marketing language. The eDJ Group relies on feedback to correct inaccurate listings and everyone is encouraged to contribute new applications and features. The eDJ Group offers a service level called "eDJ Reviewed" in which the eDJ Analyst team maintains the listing in the eDJ Matrix (details below).

All categories, descriptions and features in the eDJ Matrix are based on analysts' industry knowledge and supplemented with direct input from the applications' product managers or other company representatives wherever possible.

Solution Provider Dashboard

Solution providers are able to create and maintain their eDJ Tech Matrix dashboard dependent upon permissions set by their level of membership. Free listings have a simple dashboard to assist managing the listing. eDJ Reviewed applications have a dashboard that allows viewing of certain site, page and user demographic metrics as well as other beneficial features..

Provider and Application Profiles

All solution providers can manage the features and profile elements of their free basic listings. The solution profile page gives readers clear and concise information on the type of offering, purchase options, target market, recent web/news mentions and all the functions/features offered. Site subscribers can follow solution releases and solution related news stories.

eDJ Reviewed

The eDJ Matrix does not endorse or promote any specific applications or service providers, but it does indicate where eDJ experts have spent at least two (2) Analyst hours per quarter reviewing the technology features and/or service offering.. The eDJ Group strives to provide an unbiased, accurate resource by generating an expanded objective application description to enable consumers to quickly understand the application scope. All eDJ Reviewed providers will receive a designation on the eDJ Matrix differentiating it from free listings and will also be placed at the top of search listings above free listings. For more information on becoming eDJ Reviewed, please contact sales@edjgroupinc.com.

The eDJ Matrix For Consumers

The eDJ Matrix is an independent initiative to assist users of eDiscovery and Information Governance solutions in making sense of the wide array of applications and services on the market. It enables users to search over 220 applications with 134 features that have been submitted by eDJ experts, users and solution providers for easy search, sort and comparison. Various levels of free and paid membership allow access to a range of information as well as different search and comparison capabilities.

Solution Browsing and Searching

Browsing and searching capabilities allow eDJ Matrix users to narrow a list of application or services down to those that best meet their needs. When searching, users can easily set the criteria based on individual needs, allowing knowledgeable users to directly access the information they need. When browsing, the user is guided through explanatory steps in setting criteria that narrows down possible solutions in stages. Whether searching or browsing, the result is a list of solution options that can then be filtered again if necessary.

Solution Comparison

Once a user has reduced their results to a list of viable candidates, they may directly compare them in a matrix of category features. Paid subscribers can dynamically add and remove products from the comparison matrix. During the comparison process users may filter out features which they do not care to include in the table as well as set weight values for prioritizing features.

Graphical Comparison Reports

Once the user is satisfied with their comparison table, they may convert it to a number of graphical options that can then be exported as a PDF file that will visually display the information from the table.

Vendor Contact

Users may contact solution providers via a product inquiry form or initiate contact directly with a vendor from their user dashboard or the solution provider's profile page.

Member Dashboard and Profile

Using a set up wizard to select their interests and desired services, registered users may configure their dashboard from which they may access the features of the eDJ Matrix. Available features are dependent upon the user's subscription level. The configured dashboard then will automatically display information relevant to the user's needs and preferences. Preferences can be based on industry, category of application, application features and vendors. This allows users to effectively subscribe to applications or service providers. The user can set global settings that affect the preferences in all dashboard features or set preferences for individual dashboard elements such as, RSS news feed, RSS blog feed, eDJ research papers, alerts, message inbox, saved searches and RFP forms.

Registered Members of the eDJ Matrix may set their profile to be public or private, while subscribers can also initiate private messages directly to another member through their public profile page as well as utilize portions of their profile in their message signature.

Don't Decide on Your Next eDiscovery Project without Consulting with the eDJ Experts' Perspective in the eDJ Matrix.
